

The Canfigure Asset Management Module provides functions for the life-cycle management of fixed assets and inventory. Assets are not limited to IT equipment, and can represent any Plant, Property or Machinery. Capture of all maintenance related data as well as financials is provided with the flexibility to further extend the database schema. Built-in workflows control the install, maintenance, transfer and decommission of assets.

The inventory function supports tracking of items across multiple locations with stock management. Our Asset Mobile app can be used to scan labels and perform stocktake.

Built-in depreciation capability and option to interface with your accounting system.

Configurable workflows can be tailored to your business.
